

Switching

MAC table, filter table, or Content addressable memory (CAM) table refers to a dynamic table in a network switch that maps MAC addresses to ports. It is the essential mechanism that separates network switches from network hubs.

Mac Table

Mac address	Address Type	Destination Port
00:0c:29:be:60:70	Dynamic	P1
00:0c:29:76:af:f4	Dynamic	P2
00:05:06:c0:00:08	Dynamic	P3
